

Grab N' Go — Safe Drinking Water, Anywhere, Anytime

The Portable Water Purification System by Fourwinds ensures immediate access to clean drinking water from any fresh water source. Configured to be carried in a backpack or rugged case, all components are easily assembled and ready to produce fresh drinking water within minutes of arriving. Each system is designed to provide immediate relief and continued service well into the future.

Fourwinds Water Purification Systems work with any source of fresh water. These flexible systems can also serve as a solar generator to support a variety of small devices.

Clean, Safe Water

The Fourwinds *Grab N' Go* Water Purification Systems use a single washable filter before entering a Ultraviolet sterilization element which kills virtually all micro-organisms. No chemicals need to be added. The system can be configured to be powered by a solar charged battery, or it can be powered by an external source, like a vehicle battery. The system can produce up to 30 gallons per hour.

Easy to Use and Built to Last

The system is simple to set up and operate. All components come assembled ready to use. Foldable containers provide water input and safe water storage. When configured with a solar panel and battery, it also serves as a solar generator, providing power for accessories, such as lights, fans, chargers, radios, etc. Fully illustrated instructions ensure ease of operation and maintenance.

Perfect for Disaster Kits or Camping

The *Grab N' Go* system is easily stored and kept ready for quick deployment and use when needed. It's perfect for disaster relief or for providing safe water and power for a weekend camping trip. The system is environmentally friendly and energy independent.

The complete system fits into the backpack, or rugged case, including spares. Shown with optional collapsible bucket, canteen and LED task/spot light.

Fourwinds Water Purification Systems

WPS-BPV	For use with external 12 VDC or 110 VAC
WPS-BPS	Solar charging panel and battery included
WPS-200	Case mounted, 1 gallons per minute
WPS-400	Case mounted, 4 gallons per minute

Made in the USA

The World Health Organization has identified unsafe drinking water as the largest contributing factor to the problem of disease control. More deaths are attributed to unsafe drinking water each year than to natural disaster, war, terrorism and weapons of mass destruction combined.

- Solar Configuration
 - Everything you need in one kit
 - All components are well protected
 - Quick grab and go for your remote needs
- UV Purifier
 - Disinfects virtually all microorganisms
 - Long life, 9000 hrs (270,000 gal)
 - Safe - No overdosing on added chemicals
 - Chemical free - No chlorine taste or corrosion
 - Stainless steel construction for long life
- Filtration
 - 5 Micron Stainless Steel filter
- Long lasting, marine grade construction
